03/2015

I am sure that our March newsletter will make happy especially those of our Czech and foreign customers who are waiting and asking for the AH-1G Cobra model with camouflages from Vietnam. Yes, it is finally here! And also freshly awarded with the Model of the Year 2015 prize at the Nuremberg Spielwarenmesse Toy Fair. And this model is not the only one we would like to present here, there is yet another new model in two different boxings and also a couple of re-issues. Well the March news are:

SH72076 AH-1G Cobra "over Vietnam with M-35 Gun System" 1/72

Highly detailed model from a steel mould that is characterised by very easy assembly. It consists of five sprues with grey plastic parts and a clear parts sprue. The clear canopy is split up into five separate parts and there are also clear parts for the headlights and gun sight in the sprue. The canopy can be portrayed either closed or open. The instruction sheet is printed in full colour and the camouflage section contains four Vietnam-based machines which document the changes in colouring during their combat deployment.

The modeller may choose from these machines: Thor's Hammer, Cindy Ann (bearing a shark mouth), Pandora's Box and the Gladiator (again with a shark mouth on its nose).

CAMO. A1 - as flown by Cattilini and Bottger (Cattilini is credited as the originator of this ship's name and artwork)

CAMO. A2 - as flown later by Hinton
(see SH72278 for another Hinton's machine)

CAMO. C1 - before April 1971 (2/20 ARA)

CAMO. C2 - after April 1971 (238th AWC)

When the SG-38 elementary training glider was designed by Rehberg, Schneider and Hoffmann, its constructors could not have guessed just how famous it would become. This glider very soon became a standard training machine for the NSFK which was mass produced by several factories and it could also be home-built from drawings sent by post. Production was not restricted solely to Germany either and the basic design went on to be built throughout the world, making it the most widely used training glider ever known. The type was built within most European countries under a variety of different designations and amongst them was Slovakia which began production during WW2 and in post war years they continued to be built for aeroclubs in Czechoslovakia as the ŠK-38 Komár (Gnat) where they were used alongside some original ex-German SG-38 aircraft.

SH72269 SG 38 Schulgleiter / ŠK-38 Komár Czechoslovak, Polish and DDR Service 1/72

Highly detailed plastic model is moulded within a injection steel mould. Each kit contains two complete sets of sprues and can be built with a fuselage nacelle or with just the basic fuselage framework exposed. The decal sheet offers markings for three different Czechoslovak machines, one Polish and one from former Eastern Germany (DDR)

SH72319 SG 38 Schulgleiter 1/72 German and Slovak Service

In this second boxing, there are the very same sprues and also two of them. On the decal sheet you will find markings for the biggest user of this glider which was Nazi Germany and to make the choice more interesting we have added three Slovak machines (one was flying also in the post-war era) and also a German post-war and really nice plane.

Do nabídky našich modelů se vrací tři, delší dobu vyprodané modely, na které i přesto stále chodí objednávky. Jsou to:
